SUBJECT: LETTER OF SUPPORT

Dear Sir or Madam,

It has become a tradition for the students of our Faculty to make an excursion to the USA at the end of their studies. The goal is to broaden their horizons by visiting large IT companies, start-ups, various development centers and universities that dictate the trends in modern information technology. It will offer them a valuable insight into the future of the computer industry they will soon become part of themselves. They will further broaden their horizons by visiting some of the natural and cultural treasures that USA has to offer.

The purpose of the excursion is for the students to promote Slovenia and Slovenian companies in the USA, and gain knowledge and experience in the field of information science to share with both future students and general public, and thereby promote the computer industry. Continuing the tradition, senior students help new generations organize this educational excursion, which is also supported by the Faculty of Computer and Information Science.

We are convinced that the excursion will be carried out professionally and hope that you help contribute to the realization of their plan. We believe this excursion will broaden our students' horizons, expand their expertise and increase interest in the computer and information studies.

Yours faithfully,

prof. dr. Marjan Krisper
Chair of Information Science Dept.

prof. dr. Franc Solina
Dean
